

Skillveri Chroma® Z - Priming Paint Application Skills

The Skillveri Chroma® Series of XR based Industry focused spray painting training simulators are intended to complement and enrich traditional [industrial painting training](#) with higher efficiency and accuracy.

Studies show that more than 70 % of permanent failures are directly linked to the painter's skill. The high costs of mistakes, borne by the company or customers, can be drastically reduced with a small investment in focused & intuitive training.

Chroma Z simulator offers a fully immersive environment for trainees in the virtual spray booth or industrial environment with a clear perception of depth, blending a real spray gun with objects to paint on the distance, angles, machine settings, etc. to train & improve their spray painting techniques.

- Available for Airless, Airspray, Air-assist, & Electrostatic Spray Processes.
- Specialized lessons for Decorative, Auto-Refinish, Auto-OEM, Protective Coatings
- Find Dry Film Thickness (DFT) using Thickness Map
- Step-by-step lesson plan – Trigger, Overlap, Distance-Angle-Speed
- Live, real time feedback
- 3D Movement Graphs for intuitive and never-before-available insights
- Video playback of every student's practice
- *Detailed reports for analysis*
